Recent research studies deal with Advanced Oxidation Processes (heterogeneous photocatalysis/solar photocatalysis, photoelectrocatalysis etc.) and the application of novel photocatalytic materials in lab- and pilot-scale applications;
- b) Dispersion of antibiotic resistant bacteria and antibiotic resistance genes into the aquatic environment and their elimination rates during disinfection techniques and wastewater treatment methods;
- c) Biodegradation of pollutants using various microorganisms;
- d) Investigation of ecotoxicity of emerging micro-contaminants, including antibiotics and estrogens, and the effect of their by-products towards microbial consortia and
- e) Assessment of microbiological quality of the aquatic environment through the monitoring of pathogenic microorganisms and the risk assessment for public health.
